Same walls. Same brand. *A different company* underneath.

What the prior era built. What the new era built. And what we kept on purpose.

THEN · PRIOR OWNERSHIP

A brand ahead of its *engine*.

World-class creative and innovation no one else could touch — but the operation was never built to carry the brand at scale.

BRAND · R&D	Iconic. Truffles, bars, bacon bar, PB-PB cup.
SYSTEMS	15-year-old CMS · Nutracoster recipe tool, 20+ yrs · islands of data.
FLOOR TOOLS	Paper pick lists. Paper counts. Rekeying everywhere.
QA	Manual inspection. Errors caught downstream — often after shipment.
CAPACITY	~1,440 orders/day peak · manual-heavy · single-carrier rate card.
COST / SHIP	$30.83 · legacy pricing · no carrier optionality.
SERVICE	Customer replies averaged 24–48 hours.

> *"The PB-PB cup never left a kitchen recipe." The creative was there. The chassis to ship it wasn't.*

NOW · CURRENT OWNERSHIP

The brand, *plus the engine it deserves*.

Same building. Same team DNA. A modernized operational spine — connected systems, instrumented floors, simpler choices at every step.

BRAND · R&D	Kept intact. Innovation calendar protected — the reason you buy Vosges.
SYSTEMS	Current-gen MRP retires the 15-yr CMS · Flavor Studio AI recipe platform replaces Nutracoster.
FLOOR TOOLS	Tablets & scanners on every station. Paper usage cut by 50%.
QA	99.97% pick accuracy · checkweigher + scan-verified · errors caught pre-seal.
CAPACITY	~5,000 orders/day sustainable on the same footprint · 2,618/day already proven.
COST / SHIP	$12.32 — carrier simplification + rate negotiation.
SERVICE	Under 1-hour first-response with Gorgias + 24/7 virtual agents.

> *What we kept on purpose: the creative, the flavor R&D, the brand voice. None of the upgrade touched the product.*

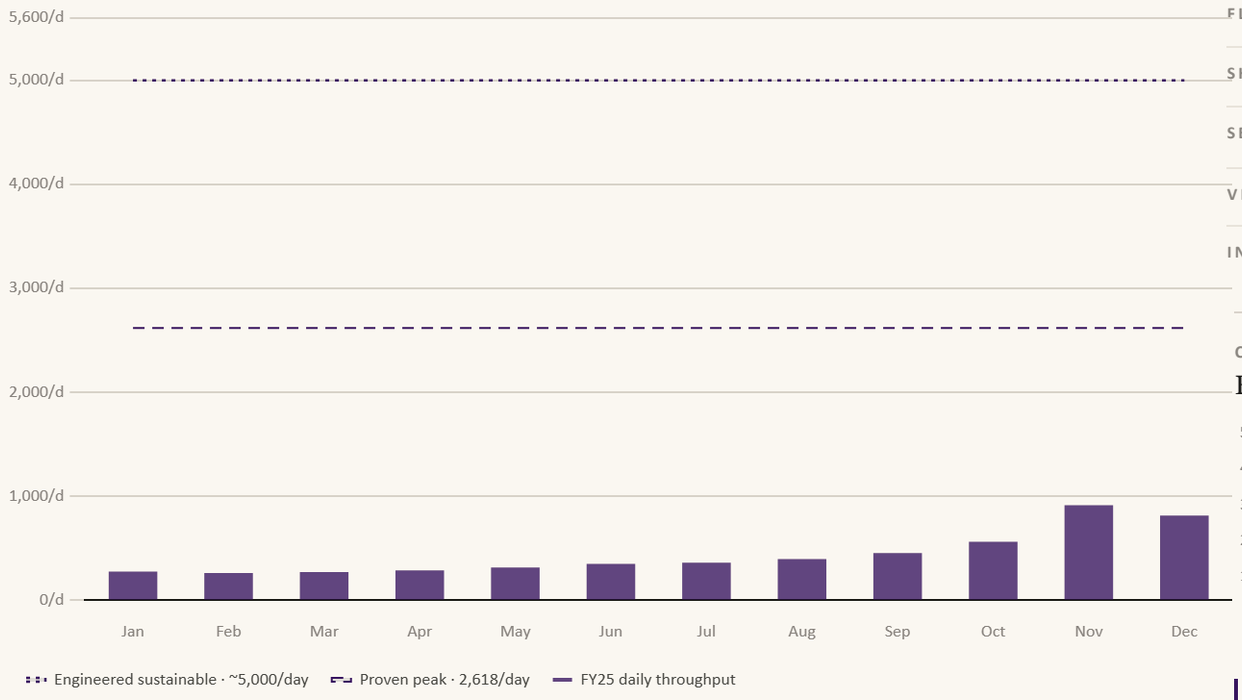
END-OF-LIFE RISK RETIRED LEGACY STACK

EXHIBIT · CAPACITY ALREADY BUILT

Proven to 2,618/day. Engineered to sustain *~5,000*.

FY25 monthly average daily throughput against the peak we've proven and the ceiling we've engineered. The gap — the white space above the bars — is capacity that already exists inside the current footprint.



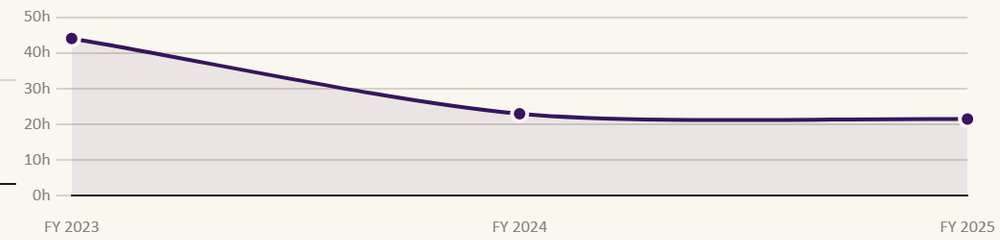
MONTHLY FY25 · SAME BUILDING · SAME RACKING · SAME CREW

WHAT THE MODERNIZATION DELIVERED

MRP	Retired the 15-year CMS; current-gen MRP in its place.	*1 stack*
RECIPE	Flavor Studio replaces Nutracoster (20+ yrs) — AI at the bench.	*Next-gen*
FLOOR	Tablets & scanners at every station. Paper −50%.	*~18 hrs/day*
SHIPPING	Carrier simplification. Ice & unboxing standardized.	*−60% $/ship*
SERVICE	Gorgias + 24/7 agents — answered under the hour.	*24–48h → 1h*
VISIBILITY	Live dashboards. 24/7 automated audits. Data-driven decisions.	*Always-on*
INTEGRATION	Every system talks to every other system.	*One graph*

CUSTOMER RESPONSE · THREE-YEAR TREND

Faster even while the line was *being rebuilt*.



Held the line during the rebuild. *Q4 2025 — the quarter we re-sequenced the pick line — closed tickets at the same speed as Q4 2024. Customers didn't feel the transition.*

Faster. Simpler. *And then — portable.*

An $80,000 investment that pays itself back in sixteen weeks — and teaches us how to wire the next warehouse in a week, not a year.

PHASE TWO · ON THE LINE

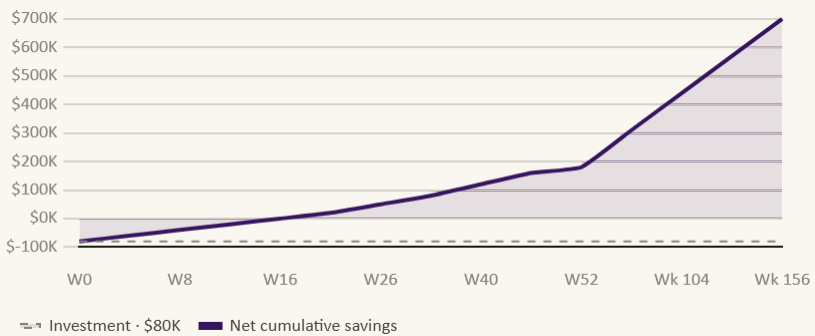
The things that still look *manual.*

Gift orders	Dedicated box-maker station at the line's head. Gift-note printed on scan — never missed again.
QA stop	QA & Organizer merge into one role. One person owns the box before it moves.
Sealing	Auto-sealer replaces manual tape & fold. Seasonal rental — paid back in one peak week.
Labeling	Three-tap ShipStation Mobile retired. Auto peel-and-apply labeler takes over.
Boxes	Sizes re-aligned to FedEx One Rate tiers. New SKUs require box-team approval.
Bedding	Pre-cut, known-weight. The checkweigher stops guessing; shipping math becomes exact.

THE MATH · CUMULATIVE $ THROUGH THE DOOR

$80K out. *$780K back.*

Wk 16	Wk 52	Yr 3
BREAK-EVEN	+$180K NET	+$700K NET



Read it this way — *every line of cost stays flat; every line of savings stacks. The curves cross at week sixteen. Everything after is structural margin on the P&L.*

AND THEN — THE REAL UNLOCK

A template that *travels.*

Chicago — HUB · FULL SKU
Node II — SUBSET
Node III — SUBSET

Every simplification on this line is a step toward a *standard* — something we can wire somewhere else.

A *portable warehouse template.* Light up a second location to fulfill a subset of products — closer to the customer, faster to deliver, cheaper to ship.

Not a bigger building. A smarter network.

Simplify first. Replicate second. The next warehouse is a configuration, not a construction project.
